XXI. Contribution to Innovation

Design and Development of "Sairam Innovation Ecosystem"

Transforming engineering education is one of the visions of Sairam Institutions. To fulfil this vision, I have designed and developed an innovative competition based learning model named "**Sairam Innovation Ecosystem**". This model was piloted for the autonomous batch students from the academic year 2020-21. The enormous amount of positive feedback from the students created confidence to implement it for the four years of engineering students in Sairam Institutions. "One Student - One

Startup" is the main focus of this ecosystem. The slow and steady process crafted to implement this ecosystem will help to achieve this target.

Sairam Innovation Ecosystem is a comprehensive well-crafted program that encourages indigenous student innovations along with lending support for setting up start-ups and incubations. The program is implemented in stages, with the overall objective of converting the student ideas into start-ups and patentable technologies. The program is implemented in four stages namely Immersion Program (generation of idea) at the I Year, Live-in-Lab (Checking the feasibility and enhancing the ideas) at the II Year , Mini Project (prototype development and its testing) at III Year and Project Development (development of final product, filing of patent as applicable and setting up of Start-ups) at the final year. Each stage is implemented through a well-formulated event **Sairam SDG Ideathon** at I Year, **Sairam SDG Solveathon** at II Year, **Sairam SDG Innovathon** at III Year and **Sairam SDG Inspirethon** at IV Year in which all the students are encouraged to actively participate. This ecosystem is implemented right from the first year of under-graduation. The prime highlight of this program is to make students solve the issues enlisted in the United Nations' Sustainable Development Goals program.
